

Change ID: 5.1-18

Procedure distance type - list of values

Summary

It is proposed to add a new value for "runway end crossing height" into the CodeProcedureDistanceType list of values (codelist).

Background

The [CodeProcedureDistanceType](#) codelist indicates the distance and altitude type associated with an approach procedure.

Rationale for the change

The value RECH (Runway End Crossing Height) is not available in AIXM 5.0 and it is needed for certain procedure encodings/design.

Change proposal details

In the CodeProcedureDistanceType data type:

- Add a new value called RECH = "Runway End Crossing Height"
