NOAA Auditorium and Science Center • Silver Spring, MD

AMDB Applications

EUROCAE / RTCA

Applications:

- Moving Map
- Routing
- Runway Safety
- ...

Functions:

- Position Awareness
- Route Awareness
- Incursion Detection
- ...

Aerodrome Mapping Standards

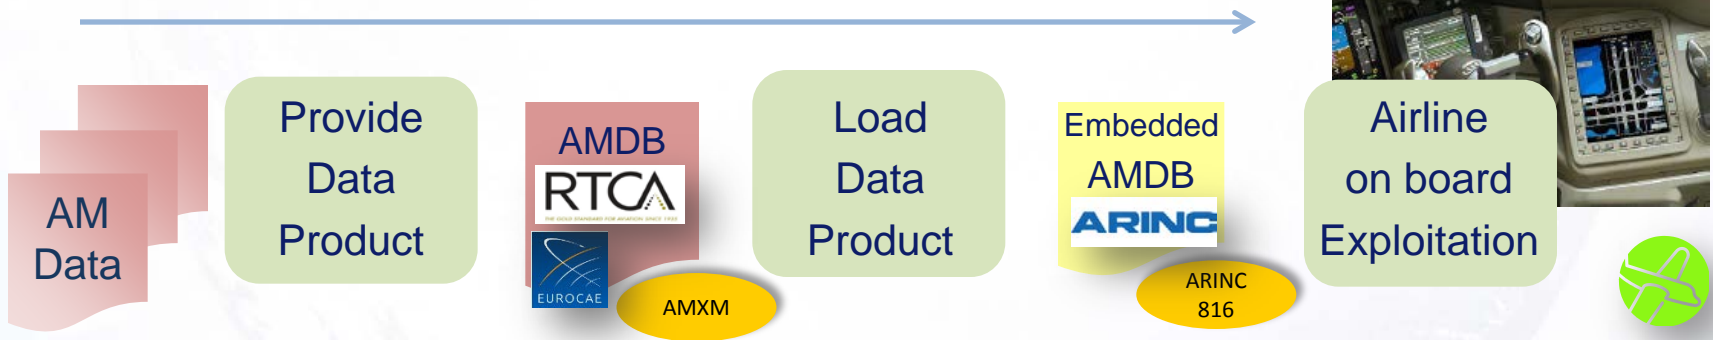

- EUROCAE WG44 / RTCA SC217
 - User requirements for aerodrome mapping information ED-99D/DO-272D
 - Interchange standards for terrain, obstacle and aerodrome mapping data ED-119C/DO-291C
- ARINC Embedded Aerodrome Database
 - ARINC816 / ARINC815
- ICAO Annex 14 & 15
- ISO19100 as standardisation framework
 - OGC implementation specifications

ICAO Annex 14 & 15

- ICAO Annex 14: Aerodrome mapping data (AMD) as "Data collected for the purpose of compiling aerodrome mapping information."
- ICAO Annex 15: Aerodrome mapping database (AMDB) as "A collection of aerodrome mapping data organized and arranged as a structured data set."

Aerodrome Mapping Standards landscape.

 GIS, AIXM5.1, AMXM, ARINC816, ARINC815

EUROCAE/RTCA ED119/DO291

ARINC816 Embedded AMDB

EUROCAE/RTCA ED99/DO272

ICAO (Annex 14/15)

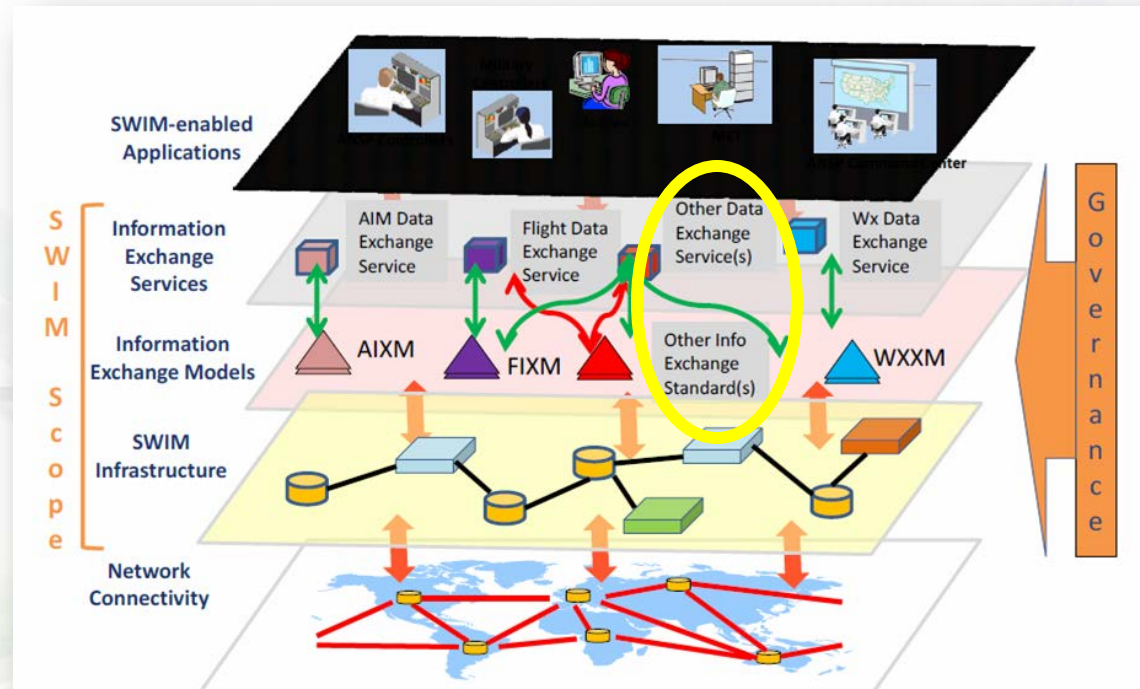

ISO19100 

AMDB SWIM provisions ED-99D / DO-272D

- Introduction to SWIM based on ICAO Doc 10039
- Example of “other”

AMDB SWIM provisions

ED-99D / DO-272D

- Characteristics for AMDB information services are:
 - The ability to filter the AMDB data by feature attribute, feature location, and time validity
 - The ability to provide a graphical representation of the AMDB data
- General requirements for AMDB information service
 - Technical requirements in ED-119C / DO-291C are applicable
 - Technical elements should be available as digital means

AMDB SWIM provisions

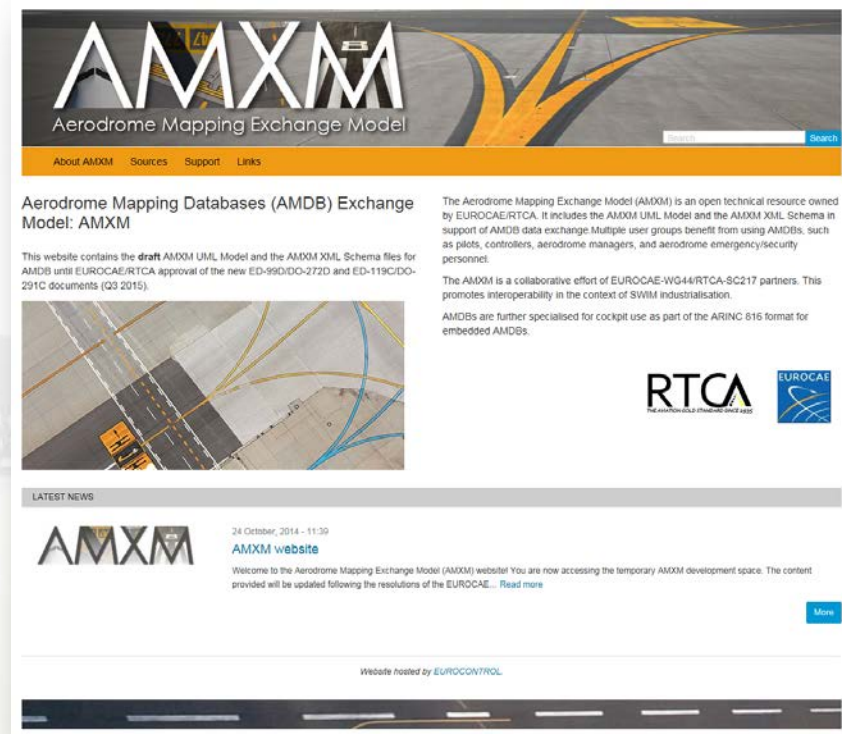

ED-119C / DO-291C

- Technical SWIM Requirements for AMDB information service
 - use AMXM UML Model for message definition
 - support spatial & temporal queries
 - use ISO 19119 for service metadata
 - make Service Level Agreement available
- Recommendations
 - context dependent Non Functional Requirements
 - use a Registry to publish information
 - OGC WFS/WMS as possible means to comply

AMXM

Aerodrome Mapping Exchange Model

- AMXM UML Model is normative
 - Implementation of ED-119C / DO-291C (ISO19110) feature catalogue
- AMXM XML Schema is informative
 - Derived from AMXM UML
 - OGC GML3.2/WFS2.0
- Q4-2015 free download from
 - EUROCAE webshop
 - RTCA webshop
 - www.amxm.aero

The screenshot displays the AMXM website. The header features the AMXM logo and the text 'Aerodrome Mapping Exchange Model'. Below the header is a navigation bar with links for 'About AMXM', 'Sources', 'Support', and 'Links'. The main content area is titled 'Aerodrome Mapping Databases (AMDB) Exchange Model: AMXM'. It contains a paragraph explaining that the website contains the draft AMXM UML Model and the AMXM XML Schema files for AMDB until EUROCAE/RTCA approval of the new ED-99/DO-272D and ED-119C/DO-291C documents (Q3 2015). There is also a paragraph stating that the AMXM is an open technical resource owned by EUROCAE/RTCA and includes the AMXM UML Model and the AMXM XML Schema in support of AMDB data exchange. A 'LATEST NEWS' section is visible, dated 24 October, 2014 - 11:39, with the title 'AMXM website'. The footer includes the text 'Website hosted by EUROCONTROL' and logos for EUROCAE, RTCA, and EUROCONTROL.

AMXM – AIXM5.1?

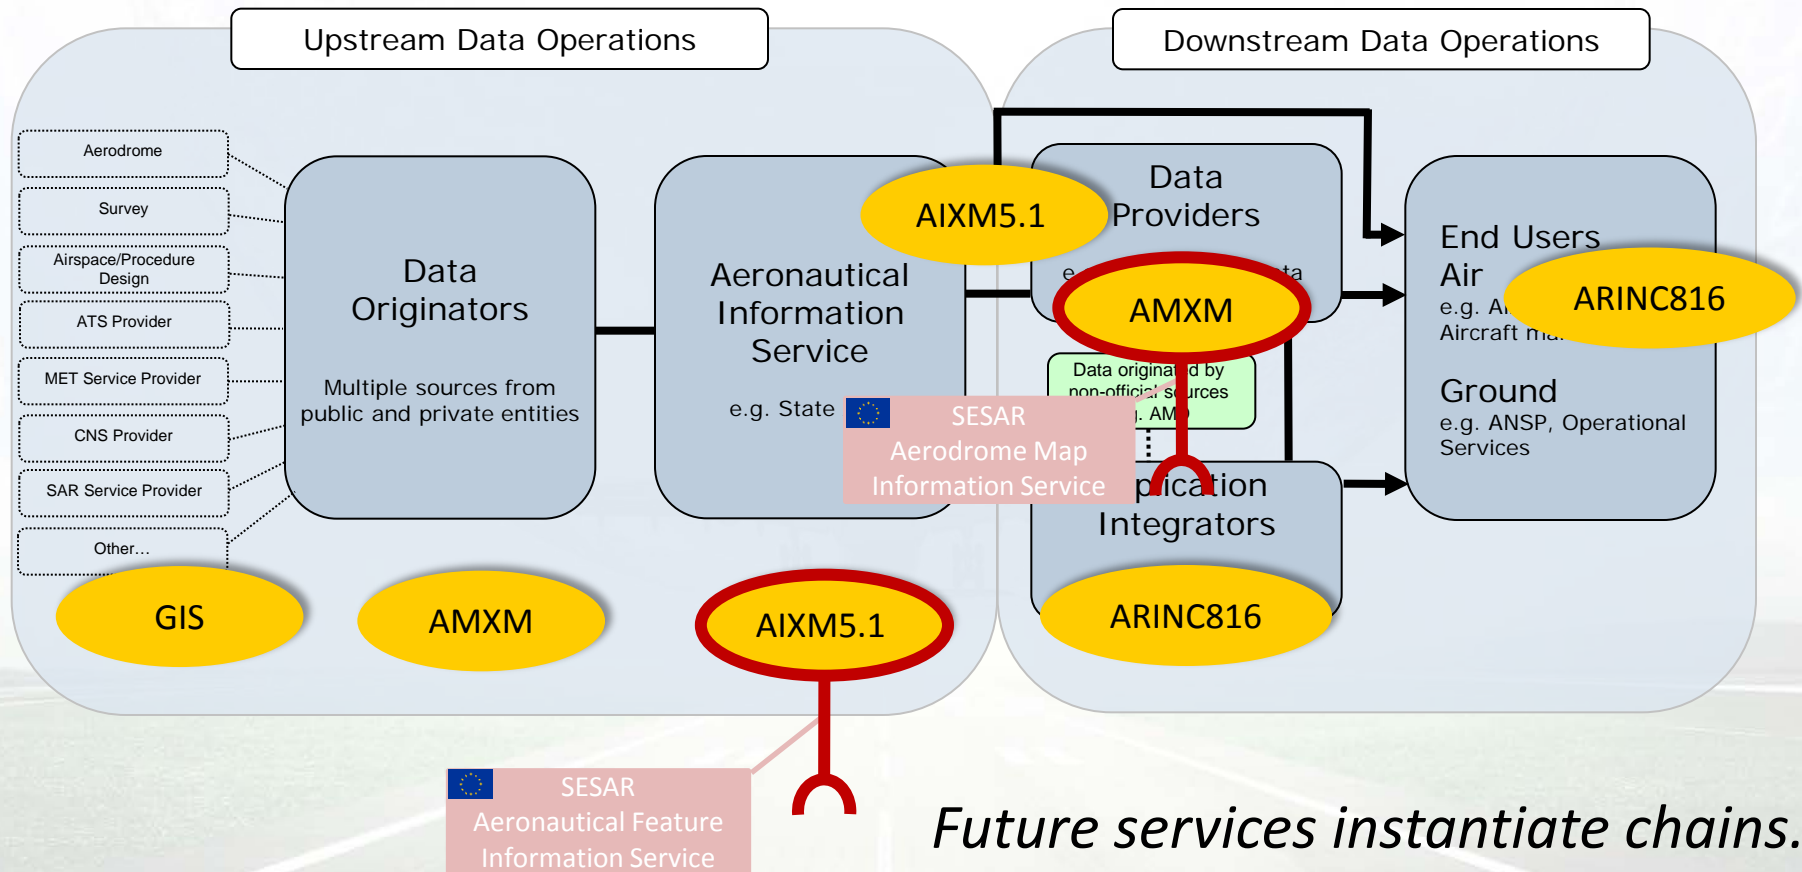

- AMXM supports the requirements of the AMDB community applications
 - GIS layers as “simple” features for portrayal
- Before SWIM: AMDB UML used in the background to auto-generate the AMDB ISO19110 Feature Catalogue
- After SWIM: AMDB UML made available as the UML part of the AMXM
- AMXM XML Schema complements AIXM5.1 XML Schema
 - Data transformations enabled through SWIM standards (effect of applying SWIM)

ICAO – AMD/AMDB Requirements

- ICAO Annex 14 sets quality provisions
- ICAO Annex 15 requires:
 - Aerodrome mapping datasets to be defined in terms of a feature catalogue and application schema
 - Datasets to contain aerodrome mapping features
 - Metadata following ISO19115
- The ED-99C,DO-272C / ED-119B,DO-291B standards may be used as means of compliance knowing that this would meet but exceed the ICAO SARPs.
- Other datasets containing AMD can be used to meet the ICAO SARPs.
 - AIXM5.1
- But complying to EUROCAE/RTCA AMDB implies **additional requirements** to be fulfilled (e.g. data capture and data encoding)

DO-200B/ED-76A

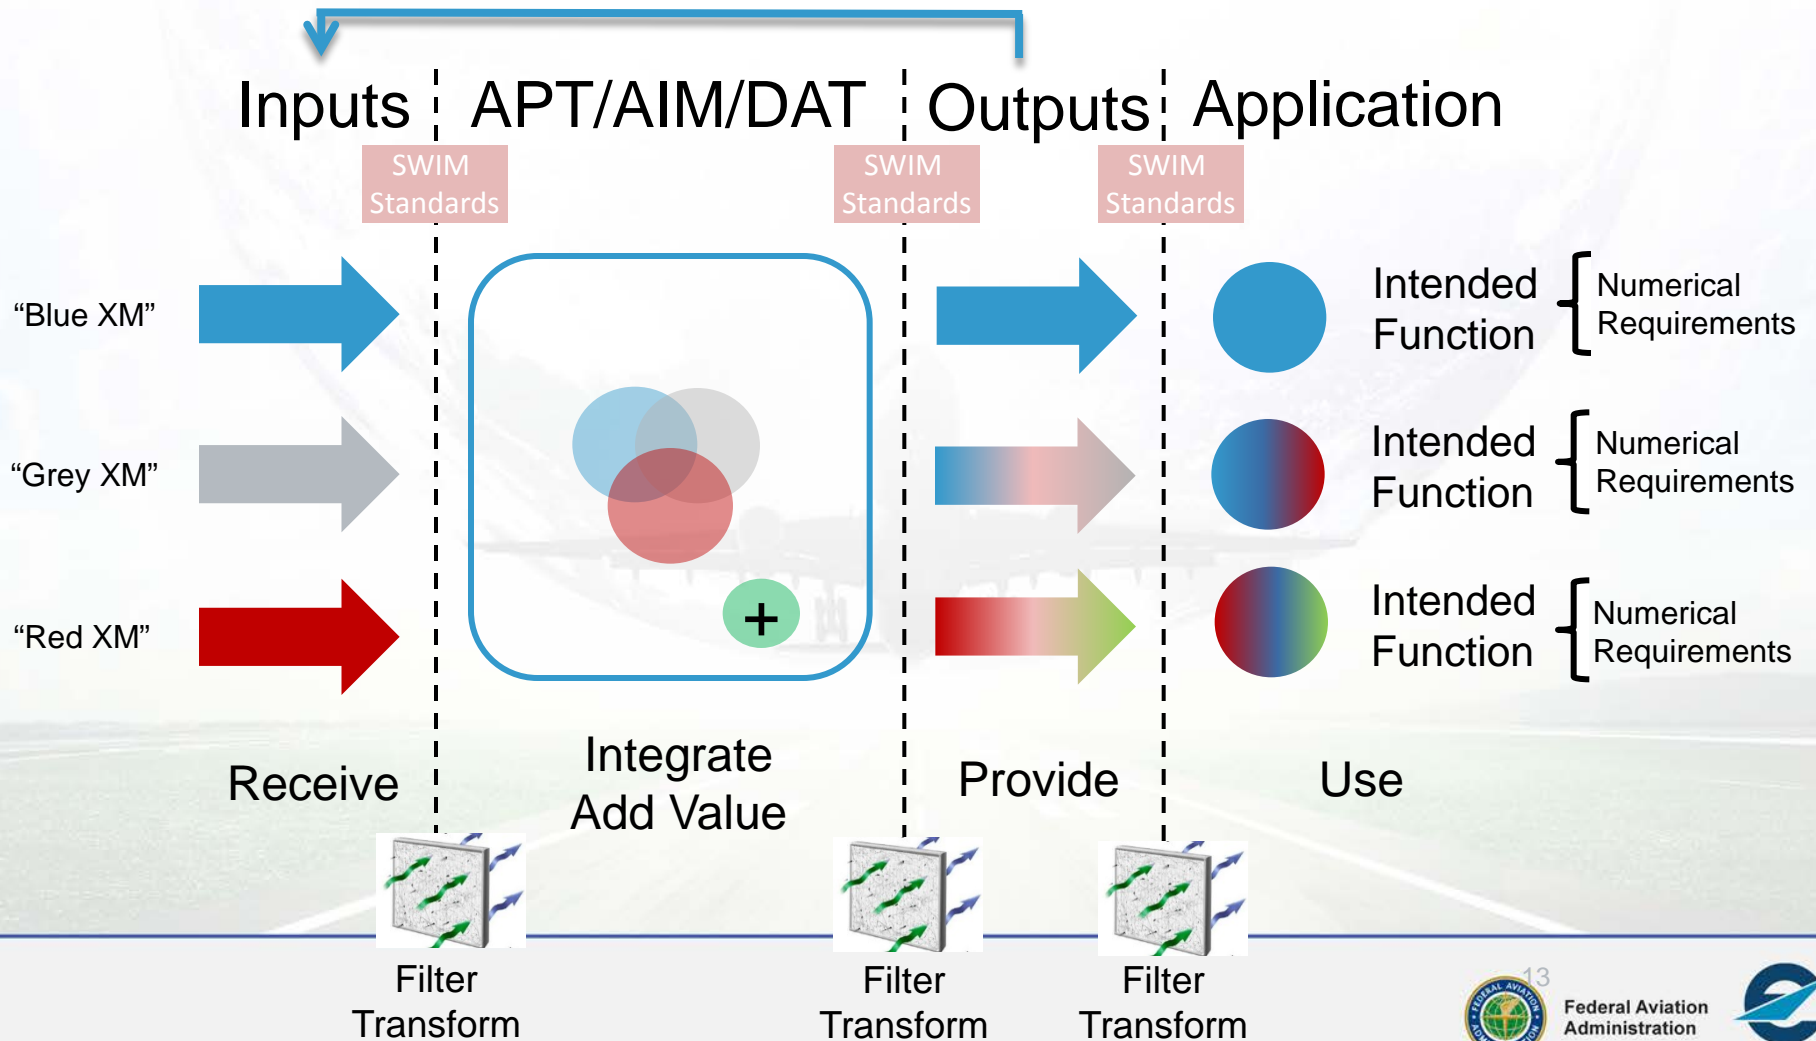

Aeronautical Data Chain

Future services instantiate chains.

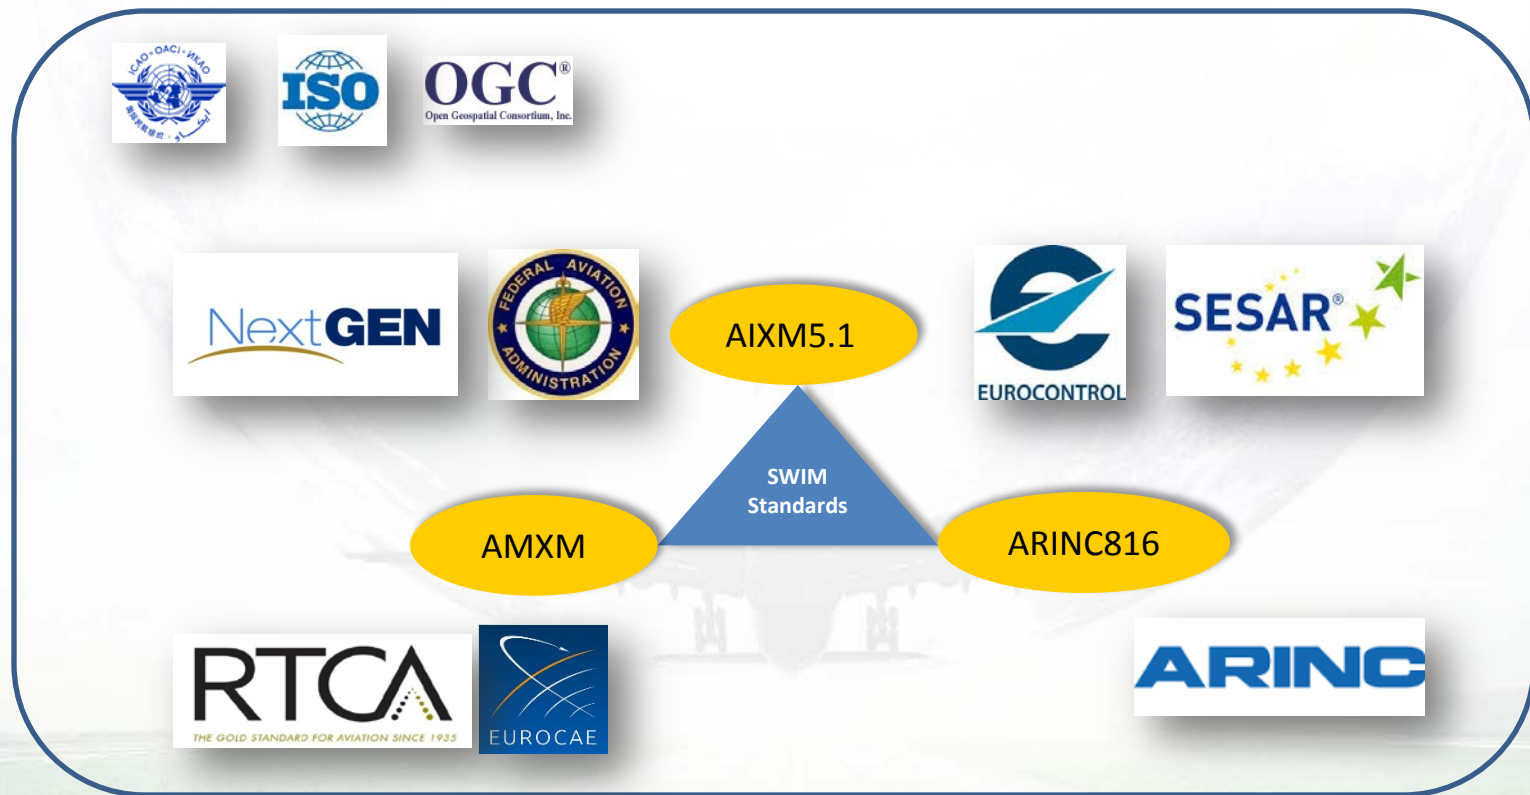

Pattern

Data tailored to function & context.

SWIM Standards

Making & keeping it interoperable.

SES SWIM Deployment:

- Role of AIRM, SWIM Governance and Information Services

Federal Aviation
Administration

Conclusion

- AMXM is a specialized XM for AMDB
 - Expresses aerodrome map data as AMDB data product
- Steps towards SWIM taken by AMDB community under umbrella of EUROCAE/RTCA
- Outlook: aerodrome mapping data exchange between multiple airport actors over SWIM using interoperable SWIM Information Services
